

The Power of QlikView ...the Flexibility of Excel

QlikView-Excel Integration for Business Reporting

QVExcel enhances the QlikView experience through a fully integrated add-in for Excel. It eliminates the need to switch between multiple applications and is available whenever comprehensive discovery is needed. There are no wizards, templates or special requirements—just access to QlikView and Excel.

Quickly and easily create reports that meet your company's unique needs and tap live data seamlessly from QlikView and use it just like any other Excel data. Changes to the underlying data will be updated in your reports to ensure integrity, consistency and currency. Blend data from multiple spreadsheets and QlikView applications and distribute the updated results as spreadsheets through conventional distribution processes.

Fully Integrated

QVExcel installs as an Excel Add-In and is available within Excel at all times. It makes QlikView data quickly accessible without an intermediary. If the QVExcel panel is not required simply hide it until it is needed.

Make ListBox Selections within Excel

When connected to a QlikView document all listboxes are presented and the selections made will be reflected in the report. It is also possible to show only specific listboxes in the Selection panel.

QVExcel Extends Your Reach

QVExcel has a few simple-to-use formulas that connect to objects and extract data such as text object values or specific cells from the QlikView application. Just like Excel's built-in formulas, it is possible to build up the QVExcel formula by referencing other Excel cells as well as form parts of other calculations such as a summation calculation.

QlikView Objects

Extract data from many commonly used QlikView objects such as Tables, Charts and Text Objects.

Expressions

An advanced, powerful feature of QVExcel is its ability to calculate QlikView expressions. This is done by using one of QVExcel's formulas, eliminating the need to have the object present in the application.

Security

QVExcel connects to the QlikView application through the QlikView Server using QlikView's security. Section Access is preserved, allowing users to access only applications, objects and data for which they have proper permissions.

Extract Objects & Fields with a Single Click

An entire table can be extracted from QlikView with just a click, or just a field. Format it differently for a report or use it's values as part of another calculation.

Distribution

Sending reports to members of your organization who do not have QVExcel is simple. With the click of a button "detach" a copy of the spreadsheet with QVExcel formulas converted to values or all formulas converted to values.

Industrial CodeBox: a Leading QlikView Developer and Partner

QVExcel is developed and supported by Industrial Code-Box Ltd., a UK-based QlikTech R&D partner with unrivalled QlikView integration expertise.

Industrial CodeBox conceived and developed the QlikView WorkBench, a framework for enabling fast and powerful integration of QlikView into web-based applications, as well as the QlikView Web Parts for Sharepoint; both have since been acquired by QlikTech.
